EDUCATION

University of California, Santa Barbara

B.S. in Statistics and Data Science

Expected Graduation: December 2026

Major GPA: 3.84

Relevant Coursework

Machine Learning, Time Series, Regression Analysis, Stochastic Processes, Computational Science, Advanced Statistical Models, Differential Equations, Technology Management, Probability and Statistics, Problem Solving in Computer Science

WORK EXPERIENCE

Foundations of Financial Technology Lab

Research Assistant

September 2024- Present

Santa Barbara, CA

- Analyzed wealth inequality in cryptocurrency markets by examining 100+ million Ethereum wallets using Python
- Implemented a data cleaning pipeline to filter wallets and ensure accurate representation of market participants
- Produced comprehensive visualizations and statistical analyses to quantify wealth distribution patterns

Tillys

Assistant Store Manager

July 2024- August 2025

Santa Barbara, CA

- Generated over \$50,000 in personal sales through customer service skills and extensive retail product knowledge
- Managed the sales floor, leading 25+ employees to meet sales goals and enhance store performance
- Assessed team strengths and areas for improvement to optimize efficiency and elevate customer experience

PROJECTS

NeurIPS Ariel Data Challenge

Project

July 2024- September 2025

Santa Barbara, CA

- Developed ensemble machine learning models (XGBoost + Gaussian Process Regression + Ridge) to predict exoplanet atmospheric compositions from 200+ GB of noisy spectral telescope data for ESA's Ariel mission
- Preprocessed and analyzed 14,000 messy image files across 1,100+ exoplanets, implementing advanced signal processing and noise reduction techniques for the observations
- Achieved a GLL score of 0.311 predicting atmospheric signals and uncertainties across 283 wavelength channels

Message Decryption using MCMC and Simulated Annealing

Project

April 2025- June 2025

Santa Barbara, CA

- Implemented Metropolis-Hastings MCMC algorithm for message decryption using alphabet permutation search
- Applied simulated annealing optimization from the Travelling Salesman Problem to enhance the algorithm and improve exploration of the permutation state space
- Analyzed MCMC convergence and investigated temperature scheduling strategies to balance algorithm exploration

Statistical Modelling for NBA Player Performance

Project

July 2024- October 2024

Santa Barbara, CA

- Developed machine learning models (Random Forest, XGBoost) and engineered features to predict player rebounds using time series NBA API data
- Implemented SHAP for model interpretability and feature importance analysis, significantly improving prediction accuracy over baseline models
- Processed and analyzed performance outcomes to identify trends and validate predictions against real outcomes

SKILLS AND INTERESTS

Technical Skills: Python, R, SQL, JavaScript, Java, C++, Microsoft Excel, Tableau, Gaussian Process Regression, XGBoost, Markov Chain Monte Carlo, Feature Engineering, Statistical Modelling, Data Pipeline Development, HTML, CSS, Typescript, Git, API Integration, Canva, PowerPoint, Pandas, NumPy, Matplotlib, Scikit-learn

Achievements: HS Valedictorian, Seal of Biliteracy (Spanish), UCSB Dean's List for Academic Excellence

Interests: Basketball, Hiking, Camping, Cooking, Running, Rock Climbing
